กิตติทัช สกุลศักดิ์พินิจ

4th-Year Computer Engineering Student · Client-facing Business Analyst · Pre-Sales

Bangkok, Thailand | +66 81-399-6955 | kittitouch.dev@gmail.com | github.com/Kittitouchhh

Computer Engineering student who **bridges business, customers and technology**. After a two-month Business Analyst internship at BluePeak Innovation, stayed on part-time while studying — **working directly with client owners and executives** on enterprise ERP projects, from discovery and requirement gathering to solution design, **client presentations and live demos**, including leading the presentation on a deal that closed. A technical background allows early, realistic feasibility judgment and turns business needs into solutions the development team can build.

EXPERIENCE

BluePeak Innovation Co., Ltd.

Jun 2026 – Present

Business Analyst Intern (*Jun – Jul 2026, 2 months*), then stayed on as a **part-time Business Analyst** while studying (*Aug 2026 – present*)

- **Client-facing from the first month:** met 50+ client-side people — owners, executives, supervisors and frontline staff — on site and in meetings, and played findings back to them for confirmation.
- **Pre-sales support:** co-presented solutions and live system demos on several deals and **led the presentation on one that closed**; answered technical questions on the spot and ran user training after go-live.
- **Facilitated requirements workshops** with 30+ factory employees and 20+ sales staff, asking follow-up questions until requirements were clear enough to build.
- **Turned unclear processes into 20+ validated screens:** mockups (Figma, HTML) and process flows (Miro) reviewed with clients before development — on one project, issues were caught at the mockup stage instead of after build.
- **Shipped to production:** staff used to search for work orders by hand; the redesigned production-tracking screen shows each department its queue at a glance, is in daily use by frontline staff and passed full QA.
- **Co-designed 40 features** from problem to developer handoff with User Stories, Acceptance Criteria and a Decision / Assumption / Risk log; reading existing schemas and code (React, TypeScript, Prisma) kept feasibility and effort estimates realistic.

SELECTED PROJECTS

Procurement & Inventory ERP — Business Analyst

Enterprise ERP project for a single client — analyzed the client's procurement and inventory processes and ran a Gap Analysis, then produced the Specification, Use Cases, User Stories and API Specs and consolidated open issues for vendor confirmation, so the project could move to kickoff.

Gap Analysis · API Specification · Approval Flow · Permission Design

Production Planning & Tracking ERP — Business Analyst

Multi-tenant platform used by multiple companies on a monthly subscription — interviewed production supervisors and frontline staff to understand the real process, then designed it flexibly enough to serve different factories, covering the timeline planning screen and the executive dashboard.

Multi-tenant · Subscription Model · Process Analysis · UX/UI · Dashboard · SQL

COOPERATIVE EDUCATION INTERNSHIP

Jan – Apr 2027

Full-time

Target roles

Pre-Sales / IT Solutions · Solution Consulting · Business Analysis · Technology Business Development

EDUCATION

B.Eng. in Computer Engineering

Dhurakij Pundit University · Year 4 · Expected graduation 2027
Cumulative GPA 3.46 (as of Year 3, Semester 2/2025)

Full four-year tuition scholarship

SKILLS

Business Analysis

Requirement Gathering · Process & Gap Analysis · Use Case · User Story · Acceptance Criteria · Specification · Solution Design · UX/UI

Client & Pre-Sales

Stakeholder Interview · Solution Presentation & Demo · User Training · Effort Estimation

Technical & Tools

React · TypeScript · SQL · REST API · Prisma · Git · HTML / CSS / Tailwind · Figma · Miro

Languages

Thai — Native
English — Working proficiency
